Steps

1. Open the Company Dashboard

Navigate to the **Dashboard** in Verified Metrics.

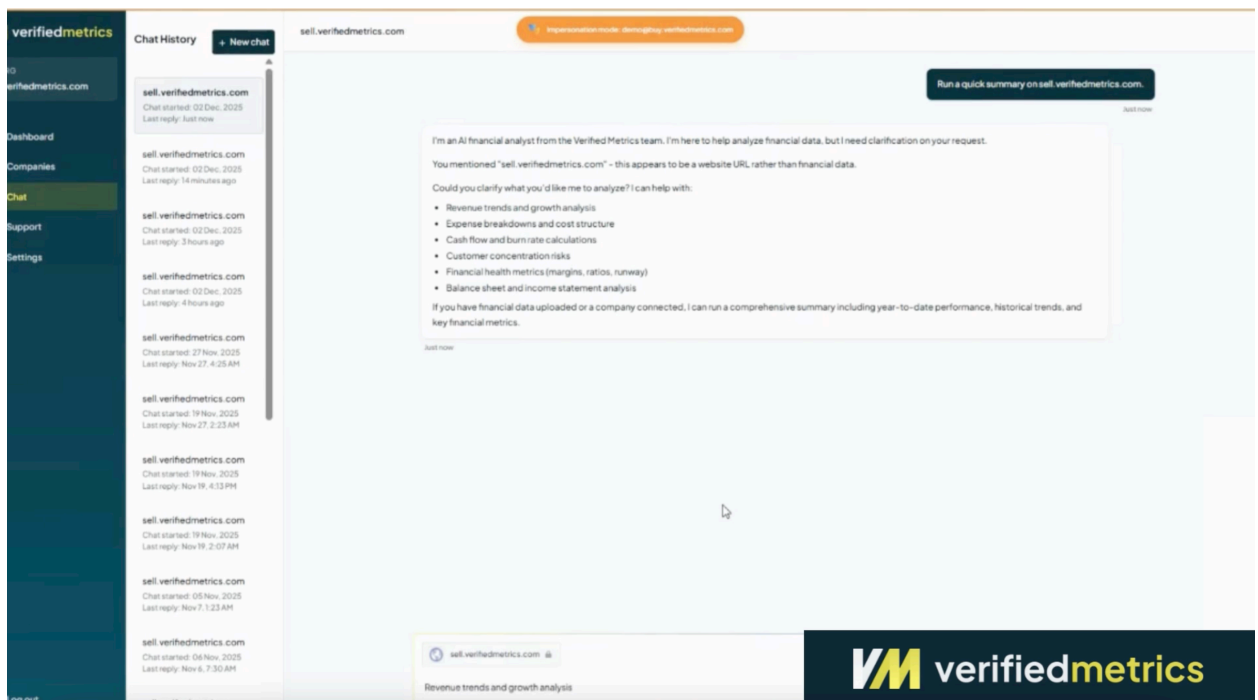

Select the company you want to analyze. This will bring you to the homepage where financial insights and actions are available.

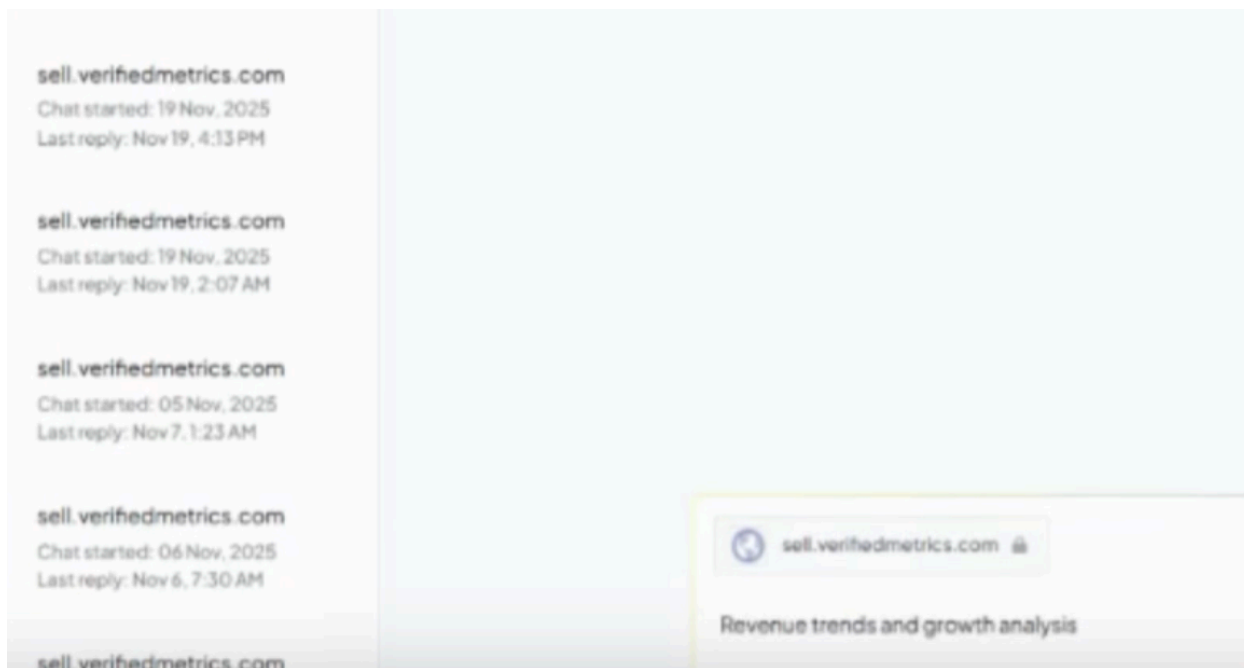

2. Run Revenue Analysis via AI Chat

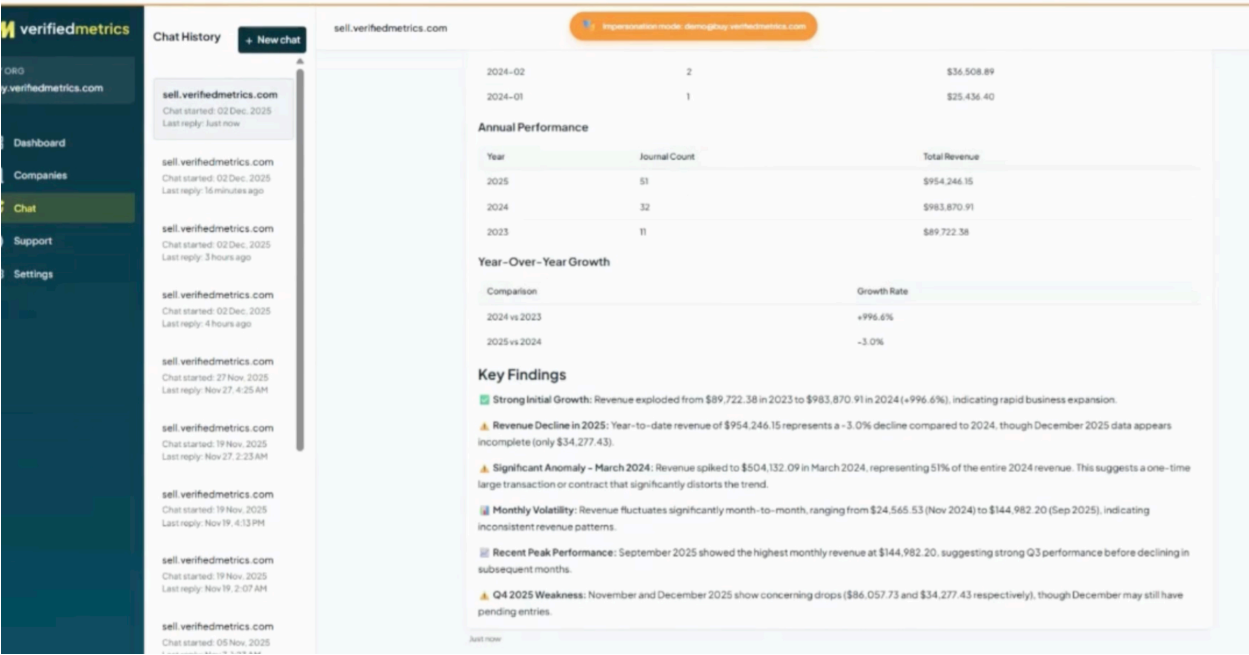

Click into the **AI Chat** window.

Type "**Revenue analysis**" and press enter to generate insights.

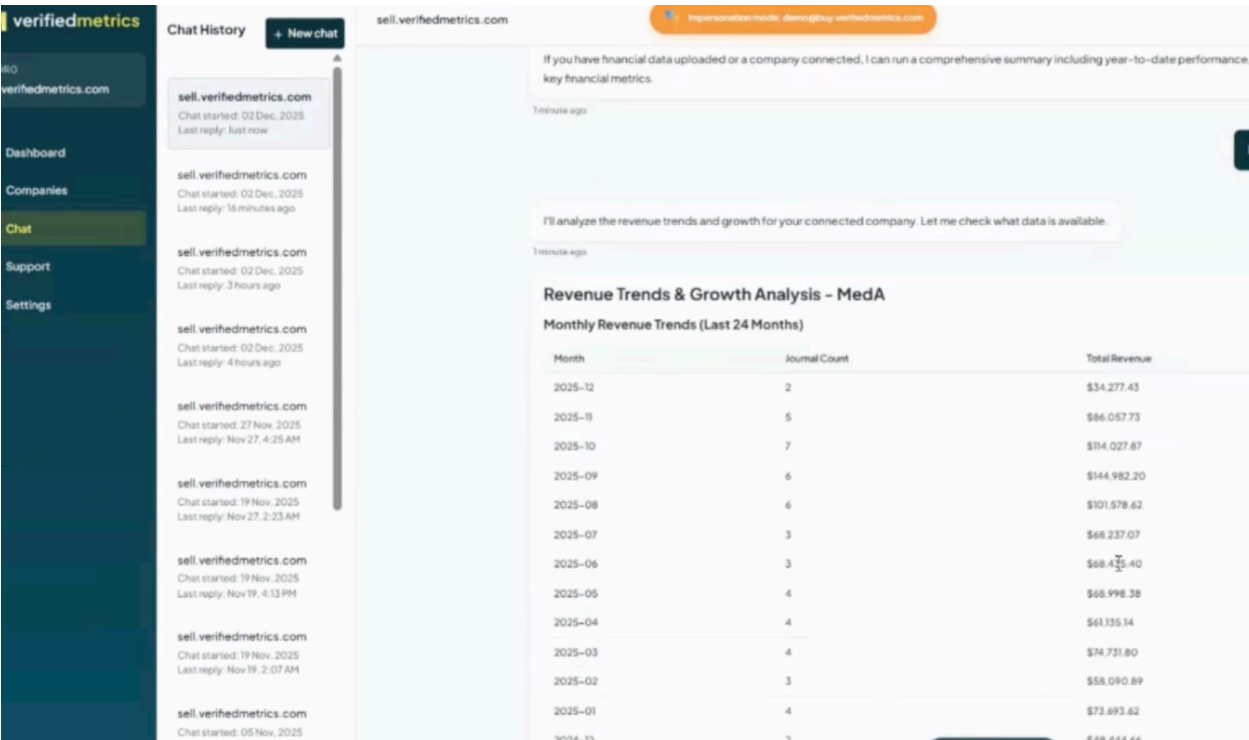

Give the system a few seconds — you'll receive revenue trends, annual summaries, and key findings automatically.

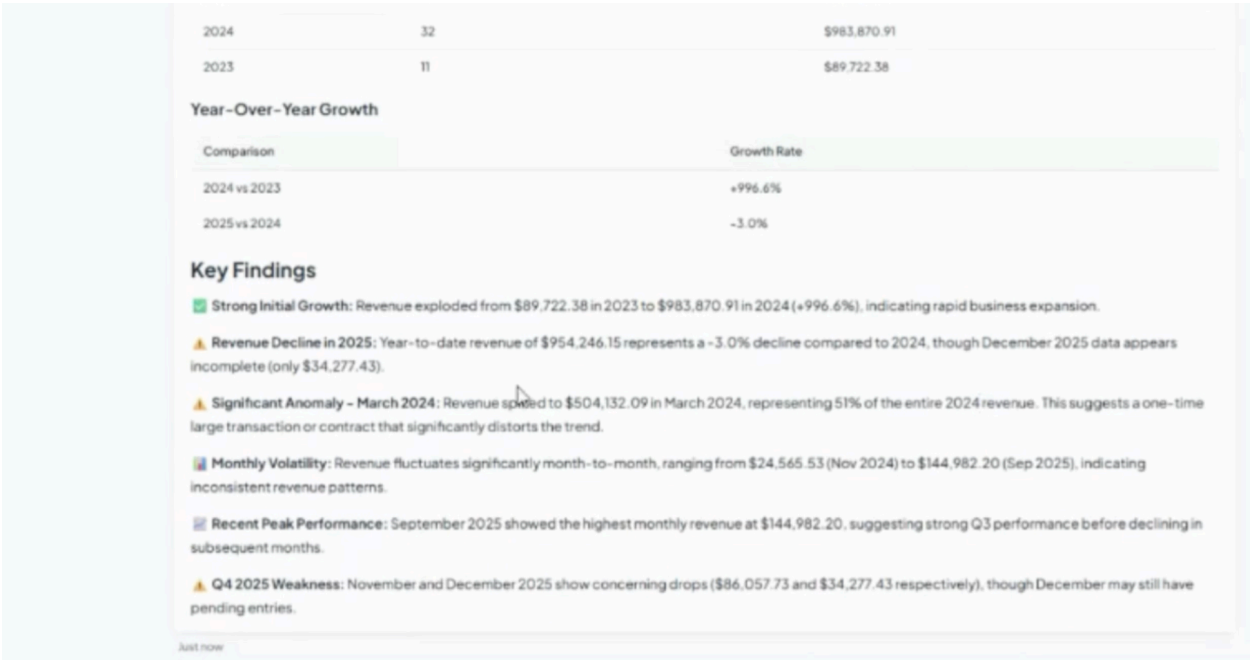

3. Review Key Findings in AI Chat

View the revenue trend over the last 24 months and projected annual figures.

Review summary findings to understand growth rate, anomalies, spikes/drops, and movement patterns.

This helps quickly assess revenue health without manual calculations.

4. Analyze Revenue & Gross Profit via the Financial Model

Go to **Models** → download or open the **Forensics Model**.

Revenue & Gross Profit Analysis

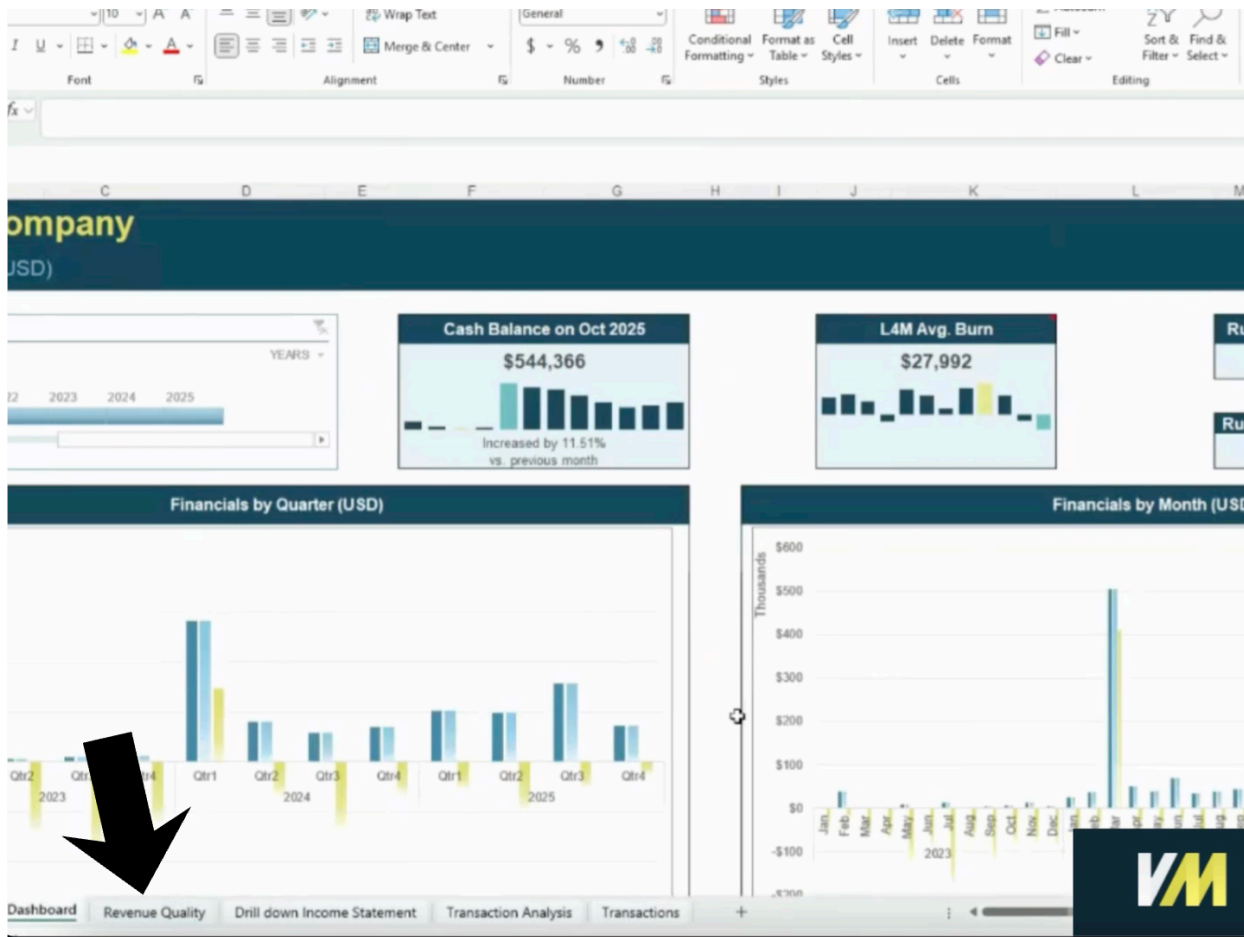

7

Navigate to the **Dashboard** tab inside the model to view **Revenue**, **Gross Profit**, and **Net Income** trends.

Use the **Revenue Quality** tab for deeper breakdowns, transaction details, and revenue type splits.

5. Compare AI vs Model Outputs

Use AI Chat for fast summaries and insights.

Use the Model to manually explore revenue components, verify anomalies, or perform deeper investigation.

Comparing both methods gives a full picture when evaluating investment potential.

Understanding Your Output

Output	What It Means
Revenue Trend Graph	Month-over-month performance of revenue over the last 24 months
Gross Profit Trend	Tracks gross profit movement relative to revenue
Revenue Breakdown	Shows revenue split per type or product line (subscription-only in demo example)
Key Findings (AI)	Summarized insights on revenue growth, patterns, spikes, declines
Growth Rate Table	Year-over-year comparison — useful for pre-investment checks

Common Issues

Problem	Solution
AI pauses or requests clarification	Re-ask with clear instruction e.g. <i>"run revenue analysis"</i>
Model output looks inaccurate	Check accounting data sources — mis-mapped accounts may cause confusion
Results differ between AI and Model	Cross-check values, AI summaries may simplify context

What's Next

✅ **You're done when:** You have revenue trends, gross profit visuals, and key findings generated.
